

AIRX DRI-BUFF

Floor Polisher & Cleaner

One-step cleaner & polish for resilient floors

A 3" ribbon of AirX Dri-Buff is enough to clean & to polish 1000 square ft.

AirX Dri-Buff is a unique floor maintenance product that cleans, polishes & protects in one easy & particularly quick operation. Use **AirX Dri-Buff** to care for any floor with a good foundation of finish. Do the entire floor or use for a quick fix of worn areas.

Benefits

Cleans & polishes in one operation. Faster than spray buffing. No mop, no bucket & no water. Easily carried until needed.

- **REPLACES SPRAY BUFFING** - Spray buffing isn't right for use with high speed machines that travel forward & backward.
- **CONVENIENT** - Handy **AirX Dri-Buff** bottle fits in pocket or in 'holster' made from a quart bottle held on handle of machine.
- **FOR A QUICK FIX** of soiled & worn areas, or use **AirX Dri-Buff** to maintain the entire floor.
- **MACHINES STAY CLEAN** - **AirX Dri-Buff** won't get all over the machine as do spray buff liquids.
- **ECONOMICAL** - A three inch ribbon of **AirX Dri-Buff** is enough to clean & polish 1000 square feet. A pint can do 220,000 square feet.
- **CLEANS & POLISHES IN ONE OPERATION** - Alternatively you must: 1. clean floor, 2. apply burnishing compound &, 3. polish.
- **IMPROVES ANY FINISH** - Removes soil, heel marks & scuffs. Fills scratches. Produces a spectacular gloss. Prevents slips.
- **SAVES TIME** - An all machine operation. Eliminating the mop & bucket brings tremendous savings.
- **REPLACES STRIP JOBS** - Removes & replaces only the soiled layer of finish to eliminate stripping & recoating.
- **SLIP RESISTANT** - Unlike many spray buff products, **AirX Dri-Buff** improves the coefficient of friction where used.
- **USE WITH ANY SPEED MACHINE** - Produces excellent results with any speed floor machine. The faster, the better the gloss.

How to Use

1. Dust mop floor & remove any gum or heavy soil with putty knife.
2. Equip machine with red, buff or white pad – preferably hog's hair type. The faster the machine, the finer (lighter color) the pad should be.
3. Apply ribbon of **AirX Dri-Buff** about 3" long in front of machine & spread over area about 1000 sq. ft. No need to 'work' area as with spray-buff. Keep moving as fast as you can walk.
4. Dust mop again to remove loosened dirt. Pad can be cleaned by tapping out loose soil.
