

## **Enviro Cleaner Technical Data**

### **Description**

Environmentally friendly, biodegradable all purpose cleaner and broad spectrum disinfectant. Enviro Cleaner contains naturally derived solvent, blended vegetable oil surfactants and phosphate free water conditioners and dispersants. Enviro Cleaner is highly concentrated and provides rapid penetration and removal of most soils off a variety of surfaces.

### **Environmental Considerations**

Primary degradation of the unique surfactant used in Enviro Cleaner is essentially complete in 3 days in comparison to common commercial surfactants which require greater than 45 days.

Enviro Cleaner uses d-limonene (orange oil) as a solvent. This is a naturally derived solvent extracted from orange peel and is biodegradable renewable byproduct of the citrus industry. Highly effective as a natural all purpose cleaning agent.

### **Multiple Applications**

Enviro Cleaner is a true multi purpose cleaner. Depending on the concentration it can be used as a stand alone cleaning product able to degrease machinery, clean concrete, clean and disinfect washrooms, clean and sanitise all kitchen surfaces, clean carpets through a carpet machine, clean upholstery, spot clean laundry, clean glass, clean walls and floors and even wash cars. This multi purpose ability makes it ideal for housekeeping and janitorial applications for BSC's, hospitality, commercial kitchens, food processing plants and all industries requiring an effective all purpose environmentally friendly, biodegradable cleaner and disinfectant.

Enviro Cleaner also has the advantage of being seawater compatible for marine applications.

### **Directions**

Dilute for use as per the attached chart.

Spray, brush or soak. Leave for 1-2 minutes to penetrate soils and then rinse or wipe off. For food surfaces rinse thoroughly with potable water.

Test fabric and carpets for colour fastness. When using strong concentrations on old paint, test effect on a small section first.

### **Disinfection**

Enviro Cleaner, by way of its cationic ingredient (quaternary ammonium chloride) will disinfect effectively at dilutions of up to 1:30 parts water.

**Safety**

Rubber gloves and safety glasses recommended.

Before using read the label and the Material Safety Data sheet for Hazard Warnings and First Aid instruction.

**Properties**

- Appearance: Pale green clear liquid
- Odour: Mild citrus

**Packaging**

5 litre container

20 litre container

200 litre drum
